C.H. GUENTHER & SON | DUNCANVILLE

PROGRAM LAUNCH · TUESDAY, NOVEMBER 17, 2026

Supervisor Productivity & Engagement Program

Small Improvements. Stronger Teams. Measurable Results.

C.H. Guenther & Son — Duncanville

Lead one improvement. We back you. Leadership sees it.

Our expectations
of each supervisor

- **Lead one improvement per cell**
- Measure before and after
- Involve your crew in the fix
- Present results at WOr

Your support
from CI, partners, leadership

- **Weekly CI coaching at the line**
- Quality and Maintenance in every cell
- Finance helps value the results
- Leadership protects time, removes barriers

Your recognition
for results your team delivers

- **Contributors credited by name**
- Your team presents to leadership
- Wins shared across all shifts
- Day-90 team recognition

Continuous improvement belongs to everyone

01

Empower supervisors

Supervisors lead real improvements on their own lines.

Measured by: projects led and presented

02

Engage our people

Operators, Quality and Maintenance solve problems together.

Measured by: ideas raised, people involved

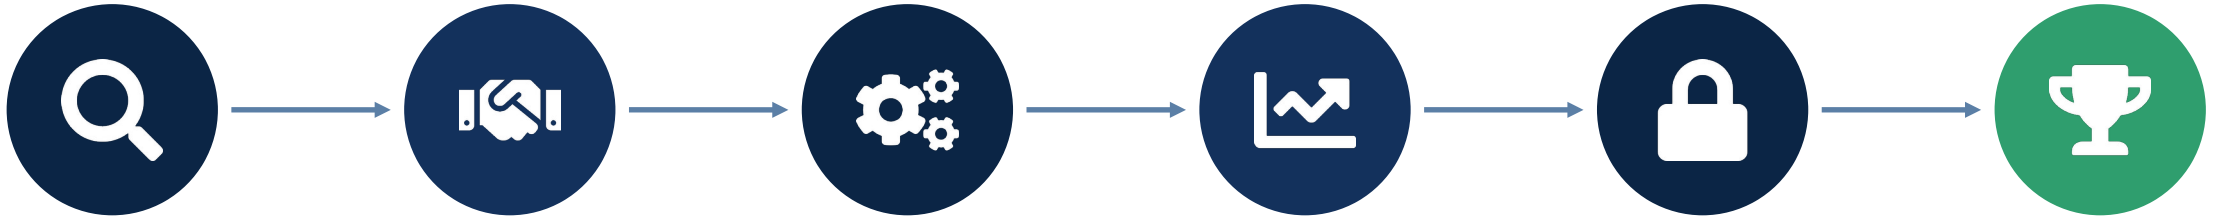

03

Improve performance

Better productivity, quality and cost, proven with data.

Measured by: minutes, scrap, validated $

One repeatable cycle, and every loop builds a leader

Identify
A real problem on the floor

Engage
The crew helps design the fix

Improve
Test, adjust, implement

Measure
Before vs. after data

Sustain
Standard work so it sticks

Recognize
Credit the team publicly

...then repeat, with a bigger problem each time

Leadership skills each loop builds

- Solving problems with data
- Coaching and involving a crew
- Presenting results to leadership

STRUCTURE

Three shift cells. CI coaches. Finance validates.

Continuous Improvement coaches every cell: tools, methods, removing barriers

A Shift Improvement Cell

- **Production supervisor** — Project owner
- **Quality** — Food safety and specs
- **Maintenance** — Equipment expertise

B Shift Improvement Cell

- **Production supervisor** — Project owner
- **Quality** — Food safety and specs
- **Maintenance** — Equipment expertise

C Shift Improvement Cell

- **Production supervisor** — Project owner
- **Quality** — Food safety and specs
- **Maintenance** — Equipment expertise

Cross-shift projects: one named owner, actions coordinated across A, B and C shift hand-offs

Finance (Randy) agrees how results will be valued, then validates the savings

The supervisor leads. Everyone else has a defined job.

OWNS

Supervisor

Project owner

- Picks and charters the project
- Owns baseline, actions, results
- Leads and credits the crew
- Presents at WOr

PARTICIPATE

Production employees

- Raise ideas
- Own named actions
- Help write the standard

SAFEGUARDS

Quality

- Food-safety review of changes
- Spec and sanitation sign-off
- Member of every cell

ENABLES

Maintenance

- Checks equipment feasibility
- Makes approved changes
- Member of every cell

COACHES

CI Manager

- Weekly coaching at the line
- Tools, templates, training
- Escalates and removes barriers

VALIDATES

Finance (Randy)

- Agrees baseline and method
- Validates against actuals
- Classifies the benefit

SPONSORS

Plant leadership

- Protects supervisor time
- Clears resource barriers
- Recognizes results

Who does it, who owns it, who signs off

Activity	Supervisor	Operators	Quality	Maint.	CI	Finance	Leadership
Raise improvement ideas	A	R	C	C	C		I
Select and charter the project	A	C	C	C	C	I	I
Measure the baseline	A	R	C	C	C	C	
Agree baseline and savings method	R				C	A	
Food-safety and quality review	R	I	A	C	C		
Equipment changes	R	I	C	A	C		
Implement and standardize	A	R	R	R	C		I
Validate financial savings	R				C	A	I
Present results at WOr	A	C	C	C	C	C	I
Remove barriers, provide resources	R				R		A
Recognize contributions	R				R		A

A — Accountable
Owns the outcome. One per activity.

R — Responsible
Does the work.

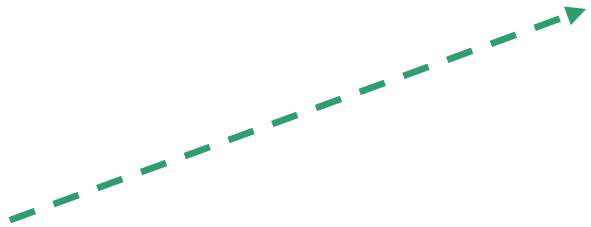

C — Consulted
Gives input before decisions.

I — Informed
Kept up to date.

Supervisors are accountable for 5 of 11 activities. Quality, Maintenance and Finance each own their sign-off.

Start with quick wins, then earn the bigger projects

Scope, skills and value grow with every completed project

STAGE 1

Quick Wins

5S, visual management, workplace organization, simple changeover fixes

One area · every cell starts here

STAGE 2

Process Improvements

Recurring downtime, setup losses, waste and rework

One process or line

STAGE 3

Larger Projects

Cross-functional productivity, standardization, verified cost reduction

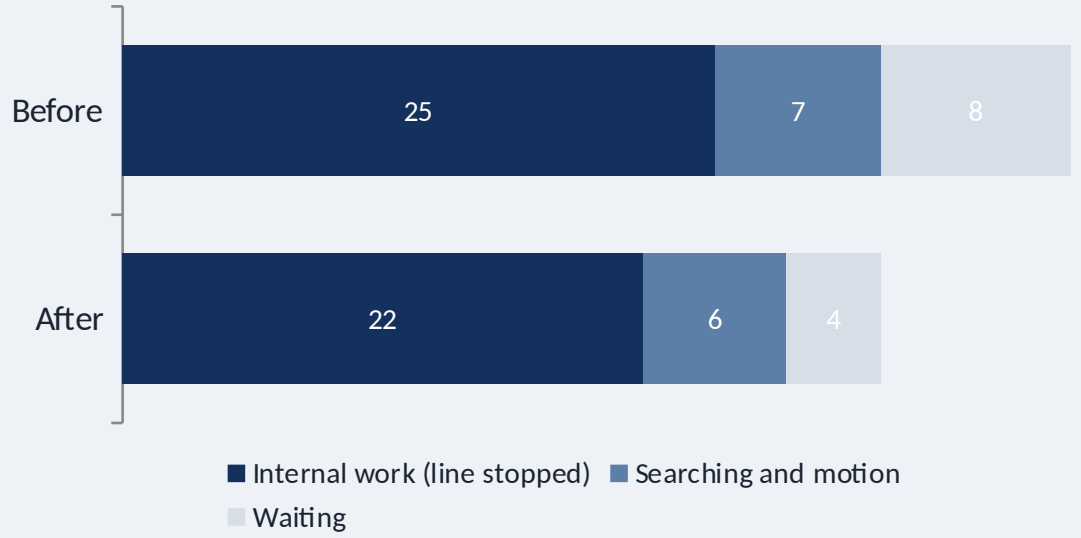

Cross-functional

Prepare before the line stops and recover minutes

1. Establish the current baseline
2. Observe the actual changeover
3. Find waiting, motion and prep waste
4. Apply basic SMED principles
5. Standardize the improved method
6. Verify over repeated changeovers

Changeover time, minutes

ILLUSTRATIVE EXAMPLE — NOT PLANT DATA

40 → 32 min 8 minutes back per changeover in this example

Hypothetical numbers that show the method. Your baseline comes from your own timed changeovers.

A place for everything, built to food-safety standards

Sort
Remove unneeded tools, parts and supplies

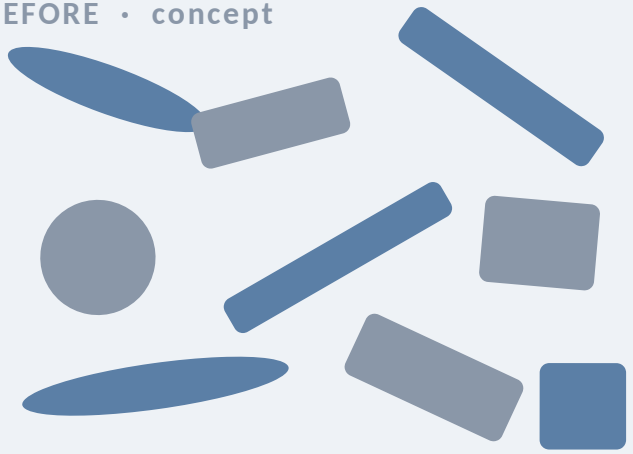

Set in Order
Shadow boards and labeled homes for change parts

Shine
Clean and inspect, aligned to the sanitation plan

Standardize
Visual labels, plant color code, one-point lessons

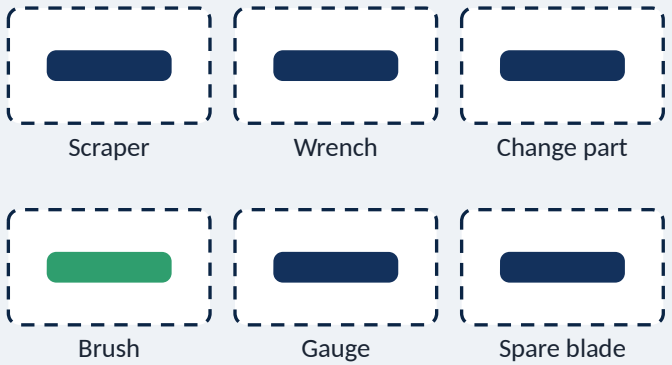

Sustain
Routine audits and supervisor walk-throughs

BEFORE · concept

Time lost searching

AFTER · shadow board concept

Missing items visible at a glance

Food safety first

- Follow the sanitation program and approved chemicals
- Keep food-contact and non-contact tools separate
- Use the plant's color code; never invent one
- Approved, cleanable materials only
- Quality reviews before anything goes on the floor

People support what they help improve

Supervisor engagement standard

PROPOSED

- Ask the crew every week what slowed them down
- Answer every idea within one week
- Give every project at least one operator-owned action
- Credit contributors by name, in front of peers

How we'll know it's working

Ideas raised | % answered ≤ 1 week | Operator actions

Pick a first project you can finish, measure and influence

ALL IDEAS

Safe No added risk to people or food safety

Small enough to complete Weeks, not months

Measurable A baseline and a number to move

Within our influence The team can change it directly

Valuable to operations Output, quality or cost

Resourced People, parts and time available

Our first project

Good first projects

- Stage change parts for one changeover
- Shadow board for one line's tools
- Stop one recurring jam on one machine

Too big for a first project

- Redesign the whole packaging area
- Replace major equipment
- Anything needing capital approval

Seven steps from problem to presented result

PLAN				DO	CHECK	ACT
1	2	3	4	5	6	7
Identify a problem	**Define the baseline**	**Set a measurable target**	**Engage the team**	**Implement the improvement**	**Verify the results**	**Present and sustain**
What's hurting us?	*How bad is it today?*	*What does good look like?*	*Who needs to be involved?*	*What are we changing?*	*Did it really work?*	*How do we keep it?*
CHECKPOINTS	CI Finance	CI		Quality	CI Finance	WOr

Teams track operational gains; Finance confirms savings

OPERATIONAL GAINS · tracked by the team on the floor

Changeover minutes
Last good to first good product

Downtime minutes
Unplanned stops, by cause

Scrap and rework
Pounds, units or cases lost

Employee participation
Ideas raised and answered

5S audit results
Score against the area standard

Action completion
Actions closed on time

Financial benefits

VALIDATED BY FINANCE

A better process is a real gain. It becomes reported savings only when Finance confirms that actual cost went down.

Operational gain = the process got better. **Realized savings** = actual cost went down, and Finance agrees.

Savings are reported only after Finance validates them

1 Agree method
Baseline, data source and valuation, at the charter

FINANCE

2 Implement
Make the change and track the measure

3 Sustain
Hold the gain over an agreed period

4 Validate
Finance checks against actual cost results

FINANCE

5 Report
By benefit type, net of one-time costs

Hard savings

Actual spend falls versus the baseline: overtime, material, scrap.

Counts as savings

Cost avoidance

A likely future cost that we prevented.

Tracked separately

Capacity

Freed time or output. Worth $ only once used.

Reported in hours

Nonfinancial

Safety, food safety, ergonomics, morale.

Reported as impact

VALUATION RULES

- Labor counts only when paid hours fall
- Scrap valued at cost, not selling price
- Adjusted for volume and mix
- Net of one-time costs; no double counting

Your project. Your results. Your presentation.

Every presentation answers six questions

1. What problem did we identify?
2. What was the baseline?
3. What did the team change?
4. What were the results?
5. What financial value was validated?
6. How will we sustain the improvement?

5 minutes | **1 page** | **Team named**

PROJECT ONE-PAGER · SAMPLE TEMPLATE Cell: [A Shift] Owner: [Supervisor]

1 · Problem

[One sentence: what, where, impact]

2 · Baseline

[Measured value, period, data source]

3 · What we changed

[Key changes and who made them]

4 · Results

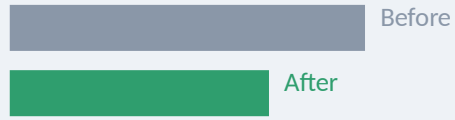

Chart of your measured results

5 · Validated value

[Benefit type and Finance-reviewed amount]

6 · Sustain plan

[Standard work, audit, owner]

Your team's results will be seen, shared and celebrated

On your shift

Supervisor credits contributors by name at the shift huddle

Same week

Across shifts

Wins posted and shared at A/B/C hand-offs

As results come in

At WOr

Your team presents its results to plant leadership

After verification

Day 90

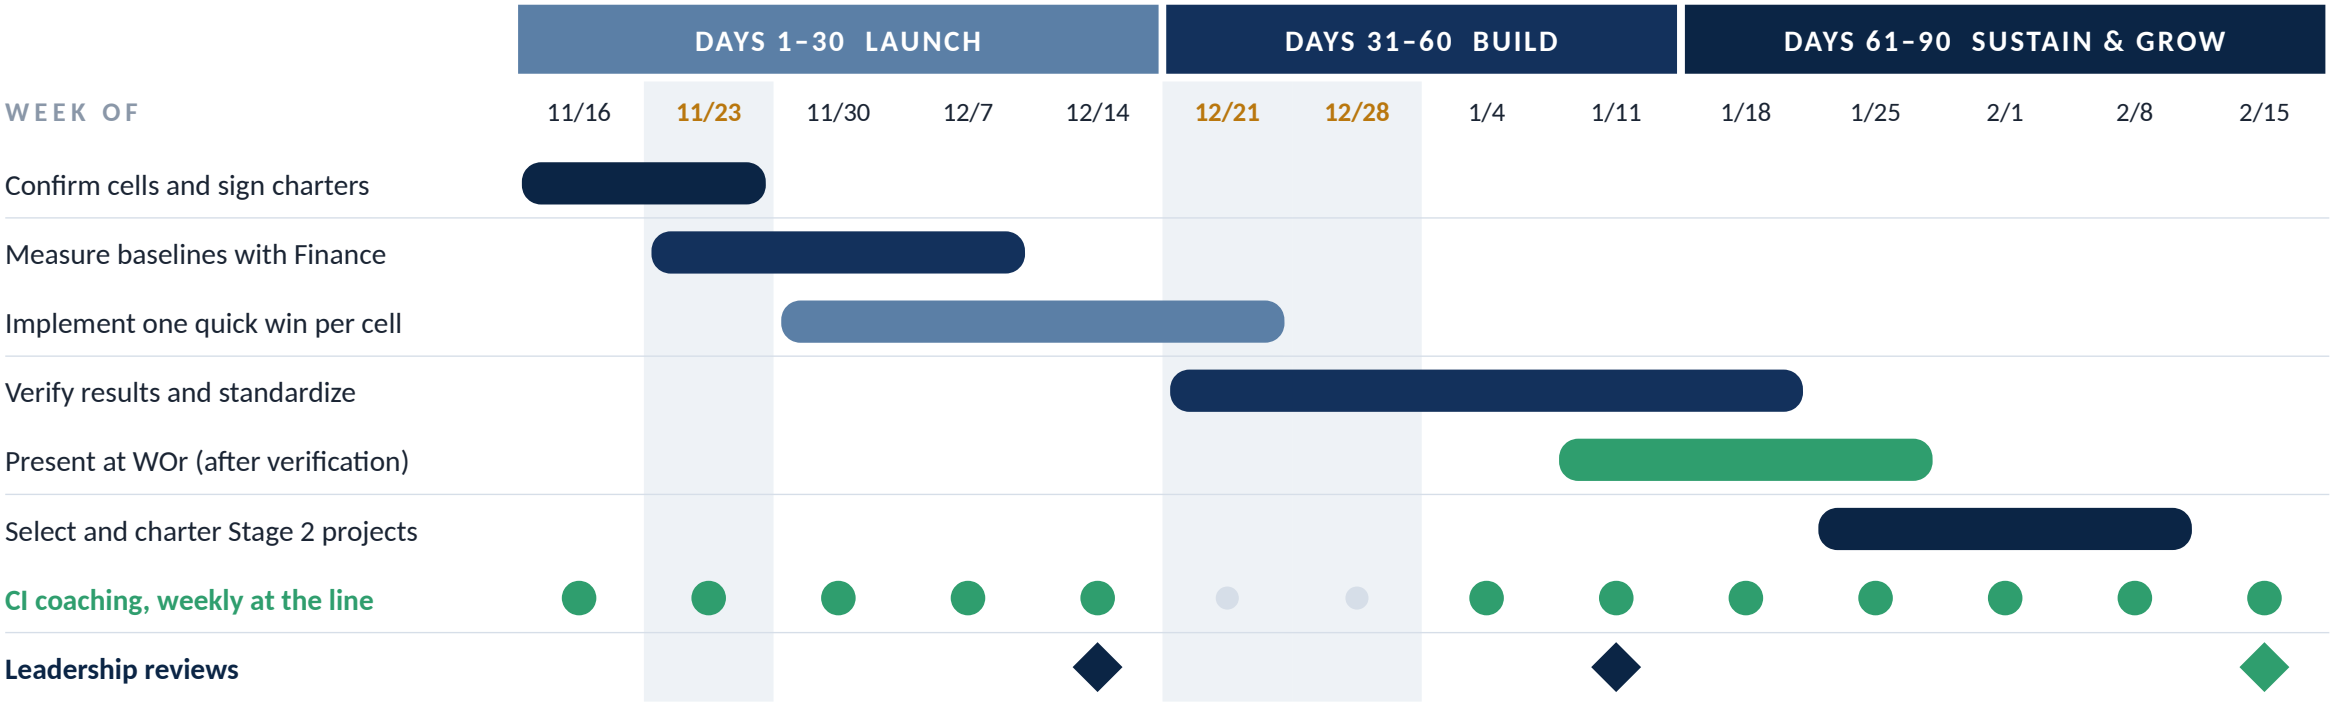

Plant leadership recognizes successful teams (format to be confirmed)

Week of Feb 15

Recognition principles

- Specific
- Timely
- Team-based
- Operators credited

Three projects chartered, delivered and recognized in 90 days

Shaded = holiday weeks (Thanksgiving, Christmas, New Year): lighter workload planned

DAY 30 · DEC 17

- 3 cells confirmed, charters signed
- Baselines agreed with Finance
- Quick wins under way

DAY 60 · WEEK OF JAN 11

- First results verified
- New standards drafted
- Wins shared across shifts

DAY 90 · FEB 15

- Gains sustained and presented
- Teams recognized
- Stage 2 projects chartered

Every Shift. Every Team. Every Improvement Counts.

1	2	3	4	5
Confirm cell members	**Assign a supervisor project owner**	**Schedule the first CI coaching session**	**Identify one opportunity per cell**	**Establish baseline data**
Supervisors, with Quality and Maintenance leads	Each cell; one owner for cross-shift work	CI Manager, with each cell	Cell team, with operator input	Project owner; method agreed with Finance
DUE FRI, NOV 20	DUE FRI, NOV 20	DUE TUE, NOV 24	DUE WED, DEC 2	DUE FRI, DEC 11

Proposed due dates: confirm before we leave today.

We are not launching another reporting exercise.

We are building leaders who improve the business.

APPENDIX

Tools and templates for supervisors

- **A1 Sample project charter**
- **A2 Example changeover project**
- **A3 Example 5S project**
- **A4 Suggested supervisor KPIs**
- **A5 Project selection scoring matrix**
- **A6 Example financial savings calculation**

All numbers in the appendix are illustrative examples, not C.H. Guenther plant data.

APPENDIX A1

Sample project charter

Project title	*[Short, specific name, e.g. "Line __ product changeover"]*	**Project owner**	*[Supervisor name]*
Cell / shift	*[A / B / C, or cross-shift]*	**Team members**	*[Operators, Quality, Maintenance]*
Problem statement	*[What is happening, where, since when, why it matters]*	**CI coach**	*[CI Manager]*
Baseline	*[Value, period, data source]*	**Finance reviewer**	Randy (Finance)
Target	*[Measurable goal and date]*	**Valuation method**	*[Agreed with Finance at charter]*
Scope: in / out	*[What is included; what is not]*	**Food-safety review**	*[Quality sign-off needed? Y/N]*
Expected benefit type	*[Hard savings / cost avoidance / capacity / nonfinancial]*	**Key dates**	*[Baseline · verify · WOr]*

Fields in [brackets] are completed by the project owner. Keep the charter to one page.

ILLUSTRATIVE EXAMPLE — NOT PLANT DATA

Example changeover project

Step	What the team did (example)	Example result
Baseline	Timed 5 changeovers on one line, last good to first good product	**Average 40 min**
Observe	Filmed one changeover with crew consent; mapped every task	**8 min of waiting found**
Separate	Split tasks into internal (line stopped) and external (line running)	**6 tasks can move to external**
Improve	Pre-staged parts cart, pre-set guides, Maintenance on standby	**Waiting and motion reduced**
Standardize	One-page changeover checklist; trained all three shifts	**Same method on A/B/C**
Verify	Timed the next 10 changeovers	**Average 32 min, held**

Reported as: 8 min of capacity per changeover. Hard savings only for paid hours Finance confirms were removed (see A6).

ILLUSTRATIVE EXAMPLE — NOT PLANT DATA

Example 5S project: changeover tool station

Sort	Red-tagged unused tools and obsolete change parts, with the crew
Set in Order	Shadow board at point of use; labeled bins for change parts
Shine	Cleaning and inspection added to the sanitation checklist (with Quality)
Standardize	Photo standard posted; plant color code for food-contact tools
Sustain	Weekly 5-minute supervisor audit; score posted at the station

Example measures

Tool search time

e.g. 4 min → under 1 min

5S audit score

e.g. 2.1 → 4.0 of 5

Missing-tool events

e.g. tracked weekly

Benefit type: mostly capacity and nonfinancial (safety, food safety, morale).

APPENDIX A4

Suggested supervisor KPIs

KPI	Definition	Source	Suggested review
Changeover time	Minutes from last good to first good product	Line logs / timed observation	Per changeover; weekly trend
Unplanned downtime	Minutes of unplanned stops, by top cause	Downtime tracking	Daily; weekly Pareto
Scrap and rework	Product lost or reworked (lb, units or cases)	Production / Quality records	Daily; weekly trend
5S audit score	Score against the area standard	Supervisor / cell audit	Weekly
Ideas raised	Improvement ideas logged by the crew	Cell idea log	Weekly
Idea response rate	% of ideas answered within one week	Cell idea log	Weekly
Action completion	% of project actions closed on time	Project action list	Weekly at coaching
Validated value	Finance-reviewed benefit, by type	Finance (Randy)	At project close

Use the one or two KPIs that fit your project, and existing plant data sources where they exist.

ILLUSTRATIVE SCORES — EXAMPLE IDEAS

Project selection scoring matrix

Criterion (score 1–5)	Weight	Idea A: stage change parts	Idea B: fix recurring jam	Idea C: redesign pack area
Safe (gate: must pass)	Pass/Fail	Pass	Pass	Pass
Small enough to complete	x3	5	3	1
Measurable	x2	5	4	3
Within team's influence	x3	5	4	2
Value to operations	x2	3	4	5
Resources available	x1	4	3	2
Weighted total (max 55)		**50**	**40**	**27**

How to use: any idea that fails the safety gate is out. Score the rest 1–5 as a team, multiply by the weight, and start with the highest total. Here, Idea A becomes the first project and Idea C is parked for Stage 3.

ILLUSTRATIVE — ALL INPUTS HYPOTHETICAL

Example savings calculation: same gain, three outcomes

Gross operational gain	Calculation (assumed inputs)	Result
Time saved per changeover	40 min baseline − 32 min verified	**8 min**
Changeovers per year (assumed)	5 per week × 50 weeks	**250**
Line time freed	8 min × 250 ÷ 60	**≈ 33 line hours**
Crew hours freed (assumed crew of 6)	33.3 h × 6 people	**≈ 200 crew hours**

What Finance reports depends on what actually changes:

A Paid hours unchanged

Capacity: ≈ 200 crew hours
Hard savings: $0

Real value, but no cost went down.

B Overtime actually reduced

120 OT hours removed × $45/h = $5,400
Less $800 one-time cost = $4,600

Only hours Finance confirms in payroll count, not the full 200.

C Freed time makes more product

Value = contribution margin on extra cases sold
Finance calculates; only if demand exists

Unsold output is inventory, not savings.
